Preoperative History and Physical Exam

5/23/2016

Susan C Rowand
12/12/1964
11014647

Chief Complaint: Left locally advanced breast cancer

History of Present Illness:

Susan C Rowand is an 51 y.o. Caucasian female To review, the patient was diagnosed with grade 3 infiltrating ductal carcinoma with evidence of lymphovascular invasion in 2015. FNA of an axillary node showed it to be positive for metastatic disease. The tumor is ER-/PR- and Her2 neu 2+ with FISH non-amplified.

The patient has been following up with Dr. Grana for neoadjuvant chemotherapy She began dose dense AC on 11/13/15 which she completed on 12/31/16. She was started on Taxol on 1/15/16 for which she received three cycles. Due to adverse affects the dose was reduced. She completed chemotherapy on 4/29/16.

She underwent a left breast US on 2/16/16 which showed interval decrease in the size of a known right breast mass, measuring 1.1 cm, previously 2.5 cm. There was no abnormal axillary lymphadenopathy noted (BI-RADS 6).

Bilateral breast MRI showed a decrease in the size of the known cancer, now 3mm, previously 2.5cm. The biopsy proven lymph node with metastatic disease is less prominent
